C Skill-gap summary

Step 1: choose a role. Step 2: tick what you have.

What you have vs. what the role needs

Pick a career path, then tick the skills you already have. The summary shows your match and what to learn next.

Data analyst & ML | UX & product design | Content & digital marketing

Side by side

Tick "I have it" for each skill you already know.

Skill	Role needs	You
Spreadsheets (Excel)	Essential	☐ Missing
SQL	Essential	☐ Missing
Python	Essential	☐ Missing
Statistics	Essential	☐ Missing
Data visualisation	Essential	☐ Missing

Problem solving	Essential	Missing
Machine learning	Essential	Missing
Communication	Valuable	Missing
Deep learning	Valuable	Missing
MLOps and deployment	Valuable	Missing

Clear all ticks

Close the gap

Learn these in order. Essential skills come first.

1 **Spreadsheets (Excel)** (essential)
Take the spreadsheet module of the Google Data Analytics Certificate.

2 **SQL** (essential)
Complete Intro to SQL on Kaggle Learn (about 3 hours), then practise joins.

3 **Python** (essential)
Do Python and Pandas on Kaggle Learn, one lesson a day.

4 **Statistics** (essential)
Learn averages, spread, probability and hypothesis tests with small datasets.

5 **Data visualisation** (essential)
Build 2 dashboards in Tableau or Power BI from public data.

6 **Problem solving** (essential)
Practise on Kaggle datasets: ask a question, then answer it with data.

7 **Machine learning** (essential)

Take the Machine Learning Specialization by Andrew Ng.

8 **Communication** (valuable)

Write a one-page summary of each project for non-technical readers.

9 **Deep learning** (valuable)

Take the Deep Learning Specialization once you have an ML project.

10 **MLOps and deployment** (valuable)

Take the MLOps Specialization and deploy a small model.

This is a self-check, not a test. Skill lists are typical for entry-level to mid-level roles and vary by employer.
